

Abstract of the Disclosure:

An apparatus includes a door, in particular, a cooking appliance door, through which a useful space can be closed, and having a stowage space, into which the door can be lowered  
5 at least partly, guided by a guide system that has a pivot axis and at least one guide element guided in a guide track, through which the door is guided in its movement along the guide track during a pivoting movement. The position of the pivot axis is fixed in the housing.
